PROFILE
Digital 380 is a 96 x 48mm panel indicator with microprocessor and full digital signal processing. Thermocouples, resistance thermometers, potentiometric transducers, current and voltage signals can be connected directly.

Digital 380 is designed for four specific applications:
- Universal indicator, for all types of input signal.
- Low-cost computing unit with analog output.
- Monitoring station with 8 input channels.
- Data acquisition station e.g. for process guidance systems.

DESCRIPTION
Universal indicator
If necessary, Digital 380 can be configured for the input signal via front panel keys.

Computing unit
Indication of temperature changes or quantities, input signal linearization, square root extraction or taring are possible with the Digital 380 basic version. External computing units and additional wiring are not necessary. The calculated value can also be accessed via the analog output.

Monitoring station
A separate channel selector unit converts the Digital 380 into an 8-channel indicator.

Channel selection is either manual by pressing keys, or automatic in "scanner mode". The selector unit is fitted with two switching outputs per channel for relay control, i.e. in the scanner mode, all channels can be monitored for two limit values. Additionally, two built-in relays provide common alarm signalling for all measured channels (Fig. 1).

Data acquisition station
Combination of a digital indicator, a selector unit and an interface module permits data acquisition from 8 channels using only one indicator. For this purpose, Digital 380 can be connected to an interface module together with KS 4290, KS 40 and KS 92/94. True system integration (Fig. 2) is possible by common connection of all these units, including KS 4580, via a bus to a visualization software.

The A/D converter with more than 25 000 steps has a resolution of 0,004% of span.

Analog output (option)
The analog output delivers the result of the second computing function as a standard 0(4)…20mA signal. The value range of this signal is selectable. Zooming permits precise examination of a section of the displayed variable. The D/A converter operates with a 10-bit resolution, i.e. the smallest step is 0,1% of the selected output span. Analog output and all other parts of the indicator are galvanically isolated.

Limit contacts (option)
The indicator is fitted with two built-in relays. Two set-points can be adjusted for each relay. Hysteresis and alarm mode (normally-open or normally-closed) are configurable.

Channel selector
Mounted side by side with the indicator, the selector switches 8 input signals to the digital indicator. The selector has no controls of its own, but has indicator LEDs for identification of the selected channel. Channel selection is controlled by the digital indicator. In scanner mode, the unit selects the channels at an adjustable time interval. Irrelevant channels can be skipped.
INPUT

Reaction time 340…500 m sec for 0…100%

Thermocouples
Input resistance: > 500 kΩ
Effect of source resistance: approx. 1 μV/Ω
Temperature compensation: internal or external (configurable)
Additional error of internal compensation with the channel selector connected: < 0.5 K
Reference temp. of external compensation is configurable: 0…60°C
Display in °C or °F.

Resistance thermometers
Pt100 to DIN/IEC with built-in linearization.
Display in °C or °F.
Sensor current: approx. 1.5 mA
3-wire connection without lead resistance adjustment.
2-wire connection with lead resistance adjustment.
Max. lead resistance with 3-wire connection: 20 Ω per lead, symmetrical.
Effect of lead resistance: ≤ 0.6 K

Potentiometric transducer
Resistance change: ≥ 30% of R_total
Calibration possible for 0 and 100%. 3-wire connection without lead resistance adjustment.
Lead resistance: ≤ 10 Ω per lead, symmetrical.

Resistance
Scaling:
Span start in Ω = 0% display value.
End of span in Ω = 100% display value.
2 or 3-wire connection.
Lead resistance: ≤ 10 Ω per lead, symmetrical.

Standard signals
0…20 mA, 4…20 mA or 0…10 V configurable.
Input resistance: 50 Ω for current signals, 100 kΩ for voltage signals.
Linearization possible for thermocouple types L, J, K, S, R, B, T and N, or Pt100 (see Tables 2 and 3).
Display in °C or °F.
Start and end of span configurable, e.g. 4 mA = 200°C, 20 mA = 800°C.

Direct voltage
Ranges: see Table 3.

Input circuit monitoring
With thermocouples: for TC break and wrong polarity.
With resistive input: for short circuit (R < 10 Ω).
With 4…20 mA signals: for I < 2 mA.
Output action is configurable.

Influencing factors
Temperature effect: ≤ 0.2%/10 K
Voltage effect: ≤ 0.1%/10% change in supply voltage.
Effect of series-mode interference: ≤ 0.1% with ≤ 0.2 V AC
Effect of common-mode interference: none with ≤ 250 V AC
Control inputs
Two control inputs for potential-free contacts or logic signal 0/5 V.
1 function key on the indicator.

Control input functions
- reset of max. value
- reset of min. value
- trigger for computing function 2
- start/stop of scanner mode
- remote/local switchover (remote operation only via interface)

TRANSMITTER SUPPLY
Voltage \( U_T > 18 \text{V} \) with 20 mA, short circuit proof.
Only for use with a transmitter connected to Digital 380.

INTERFACE
RS 485/RS 422 with protocol similar to ISO 1745.
Connection via interface module.
Max. four indicators can be connected to an interface module. 32 interface modules can be connected to a bus. Addresses: 00…99
Transmission speed: 2400…19200 bits/s
Drivers for Wizcon, FIX DEMACS and InTouch are available.

MATHEMATICAL FUNCTIONS
Functions without control input
Linearization with 16 segments
Low-pass filter, \( \sqrt{x}, x^2, \ln, \lg, e \)-function

Note:
With channel selector operation, the linearization parameters (CHAR) are valid for all channels.

Functions with control input
Integrator, differentiator, sample & hold, taring, low-pass filter, scale (ax + b), filter with operating range (bandwidth).
One function without and one function with control input can be selected for each channel (Fig. 3).
Maximum and minimum values are always stored and may be displayed on the front.

POWER SUPPLY
AC versions
230 V – 15%…+10% 48…62 Hz
115 V – 15%…+10% 48…62 Hz
Power consumption: 7,5 VA
Thermal fuse in mains transformer

Universal current versions
24 V AC –15%. .+ 10%, 48…62 Hz or 18…31,2 V DC, built-in fuse
Power consumption: 4 VA(W)

Climatic category
KUF to DIN 40 040
Relative humidity: \( \leq 75% \) yearly average, no condensation

Shock and vibration
Vibration test Fc to DIN/IEC 68-2-6:
Operation and transport 10…150 Hz, 0,15 mm, max. 2g
Shock test Eb to DIN/IEC 68-2-29:
Transport 10g, 16 ms
**EXPLOSION PROTECTION**

Intrinsic safety according to EN 50 014 and EN 50 020.
Certificate of conformity: PTB Nr. Ex-93.C.2053 X

**Protection type**
Input circuits and transmitter supply: EEx ib IIC

**Installation**
Outside the explosion-hazarded area
The channel selector type 9404 380 70021 is also intrinsically safe!

**ELECTROMAGNETIC COMPATIBILITY**

Complies with EN 50081-1 and EN 50082-1 for use within rural areas.
Complies with EN 50081-1 and EN 50082-2 for unlimited use within rural and industrial areas if shielded cables are used (not for mains cables).

**Low-frequency magnetic field**
Field strength of 400A/m at 50 Hz: no effect

**High-frequency magnetic field**
Conforms to IEC 801-3, section 9.2.
Frequency range: 25...1000 MHz
Field strength: 3V/m
Effect: \( \leq 0.5\% \)

**GENERAL**

**Housing**
Material: Makrolon 9415, flame-retardant, self-extinguishing. Flammability class: UL 94 V0

**Display**
5-digit LED, height 14mm

**Protection mode**
According to IEC 529 (DIN 40 050)
Front: IP52
Housing: IP20
Terminals: IP10

**Safety Characteristics**
According to EN 61010-1:
- Over voltage category II
- Pollution degree 2
- Operating voltage range 300 V
- Protective class I

**CE-marking**
According to European directives for Electro Magnetic compatibility and Electrical equipment use within specified voltage limits (→ Safety Characteristics)

**Electrical connections**
Flat-pin terminals to DIN 46 244 for 1x6,3mm or 2x2,8mm

---

*Fig. 5 Electrical connections of indicator*

**OPTIONS**

**Limit contacts**
Potential-free, normally open contact.
Contact rating: \( \leq 500VA; \leq 3A; \leq 250V \), resistive load.
Hysteresis and operating mode configurable.

**Mounting method**
In panel cut-out, with two clamps at the sides

**Mounting position:** not critical

**Weight:** 0.54 kg

**Analog output**
Galvanically isolated from the remaining indicator!
Range: (0)4...20mA
Current limiting: < 22 mA
Ripple: \( \leq 0.2 \% \)
Resolution: better than 0.1%
Settling time: < 0.2 s referred to display
Temp. effect: \( < 0.2 \% K/10K \) referred to display
Load: \( \leq 500 \Omega \)
Load effect: \( \leq 0.1\% \)

**Standard signals**

1) With input codes C020 . . . C049 the measuring span w0 ... w100 of the external transmitter must also be specified. Sensor monitoring only with 4 ... 20 mA.

2) With input codes C052, C053 and C060 . . . C065 the required span and display range must be specified. (x0 ⇐ w0 and x100 ⇐ w100).

3) The required engineering unit (e.g. m³/h) must be specified in plain text and will be supplied as an adhesive label.

4) Span y0 ... y100 can be specified out of the measuring span w0 ... w100.

5) The abbreviations for the required functions must be specified. Without this, no function will be configured.

6) For limitation of sensor monitoring function with standard signals, see Note 1.

**TECHNICAL DATA OF CHANNEL SELECTOR UNI**

Because the Digital 380 controls the channel switching, the channel selector can only be used together with the indicator.

**Relays**

Special relays are used for channel selection, with a life of $2 \times 10^8$ operations (> 10 years at a switching frequency of 2s). The relays have UL and CSA certification.

**Mounting**

Directly above or at left of indicator

**Operating modes**

Manual: channel selection by pressing keys

Scanner: automatic channel selection, with scanning interval configurable 2...60s/channel

One of the eight channels can be connected to the analog output.

The inputs of channel selector type 9404 380 70021 are intrinsically safe!

With current measurement, the voltage drop across the channel selector is max. 7,5V.

**Connection**

Connecting module for standard rail mounting (order separately).

Dimensions: 112,5 x 77 x 55 mm

Sensor for temperature compensation built into the connecting module.

**Weight:** 0,33 kg

**Alarm outputs (option)**

2 switching outputs per channel as limit contacts.

Ground potentials are connected.

**Electrical connection**

Basic relay module with 4 plug-in relays and connecting terminals for 24V DC supply.

Extension relay module with 4 plug-in relays.

Dimensions: 87,5 x 77 x 65 mm

Relays used: potential-free changeover contacts for $\leq 500$VA, $\leq 250$V, $\leq 3$A at 48...62Hz, resistive load.

Max. 1 basic and 3 extension modules can be used with one channel selector.

To energize the galvanically isolated output stages, a 24V DC supply, + 15%...−20%, must be connected to the basic module.

Current consumption: approx. 10mA plus 25mA per relay (max. 500mA).

**Recommended power supplies**

For max. 8 relays:

Weidmüller RS-T/AC230 (250mA)

For more than 8 relays:

Phoenix CM62-PS-220AC/24DC/0,6(A)

**Accessories**

**ORDERING EXAMPLES**

**Example 1**
An indicator with the following configuration is required:
- Supply voltage: 230 VAC
- Input: 4...20mA \(\neq 0.00 \ldots 50.00\) bar
- Break monitoring: upscale
- Analog output: 4...20mA (corresponding to 25.00...50.00 bar)
- Relays L1 and L2 for normally-closed operation.
- Interface: 19.200 bits/s
- Math. function 1: 1st-order filter
- Math. function 2: sample-\&-hold amplifier

**Ordering text:**
Pos. | Order no./ Description | Qty.
--- | ----------------------- | ---
01  | 9404 380 63011 C039, C100, C202, C400, C500, C806, Func1 = LAG1, Func2 = TRST, \(w_0/w_{100}: 0.00 \ldots 50.00\) bar, \(y_0/y_{100}: 25.00 \ldots 50.00\) bar | 1

**Example 2**
An indicator with the following configuration, a channel selector and two relay modules are required:

**Indicator**
- Supply voltage: 24 V UC
- Input: NiCrNi
- Break monitoring: upscale
- Analog output: 4...20mA (corresponding to 600...1200 °C)
- Relays L1 and L2: not active
- Interface: not used
- Math. function 1: not used
- Math. function 2: not used

**Channel selector**
- With 16 switching outputs.

**Ordering text:**
Pos. | Order no./ Description | Qty.
--- | ----------------------- | ---
01  | 9404 380 63311 C002, C100, C202, \(w_0/w_{100}: 200 \ldots 1200\) °C, \(y_0/y_{100}: 600 \ldots 1200\) °C | 1
02  | 9404 380 70031 | 1
03  | 9404 380 75021 | 1
04  | 9404 380 75031 | 1
05  | 9404 380 75041 | 1

If each channel is to have a different configuration, the individual configurations must be specified (max. 8).
