EXPERT FUNCTIONS

- Start-up and shut-down of tempering units
- For operating hot-runner systems
- Serial TTY or RS 485/422 interface
- Start/stop functions for local and remote operation

STANDARD FUNCTIONS

- Universal continuous/switching version, i.e. reduced stocks
- 100 ms cycle time, i.e. also suitable for fast control loops
- Freely configurable analog output, e.g. as process value output
- Customer-specific linearization
- Settings can be blocked via password and internal switch for high security
- Extended temperature range up to 60 °C allows mounting close to the process
- Easy 2-point or offset measurement correction
- Emergency operation after sensor break by means of the "output hold" function
- Logical combination of digital outputs, e.g. for general alarm
- Built-in transmitter power supply
- Splash-water proof front (IP 65)

APPLICATIONS

- Plastics processing
- Tempering units
- Hot runners
- Driers

DESCRIPTION

The temperature controller KS 50-1 TCont is intended for precise and cost-effective control tasks, primarily with tempering units and hot runners. The process value signal is connected via a universal input. A supplementary analog input can be used for heating current measurement or as an external set-point input.

Every KS 50-1 TCont has three process outputs that can be 3 relays or 2 relays plus a universal output. This universal output can be used for operating a solid-state relay, a continuous current/voltage output or to energize a two-wire transmitter. Additionally there are two additional opto coupler outputs.

The selectable function „start-up“ ensure increased lifetime of high-performance electrical heating elements (e.g. hot runner moulds).

Plug-in module

KS 50-1 TCont controllers are built as plug-in modules. This enables them to be replaced very quickly without tools, and without disturbing the wiring.

Self-tuning during start-up and to the setpoint

This new function determines the optimum settings for fast line-out without overshoot. With three-point controller configuration, the „cooling“ parameters are determined separately, thus ensuring an optimum match to the process. By pushing a button the KS50-1 TCont determines the best control parameters at the actual setpoint. This function does not require oscillation, and performs a minimal deviation of the process value. An automatic start of the self-tuning function can be disabled.

Display and operation

Clear information are given by ten indicator LEDs in the front panel that display operating mode, I/O states, and errors. The Ò-key switches the controller into the manual mode directly. If required, the direct switch over can be disabled or the key can be configured e.g. reset the latched alarms. Due to the flexible use of the function key, an external switch or contact is not required in many cases, e.g. because remote/local switch-over can now be done directly.
Front interface and Engineering Tools
Control parameter adjustment in seconds has now also been implemented in the KS 50 class of instruments. Via the BlueControl software incl. its simulation functions, and especially the convenient BluePort front panel interface, the required set-up for a specific control task can be determined without a detailed study of the operating instructions. Of course almost all adjustments can be done comfortably over the instrument front. (see page 7, BlueControl)

Password protection
If required, access to the various operating levels can be protected with a password. Similarly, access to a complete level can be blocked.

Table 2 Resistance transducers

RESISTANCE THERMOMETER

Connection: 3-wire
Lead resistance: max. 30 Ohm
Input circuit monitor: Break and short circuit

Special measuring range
The BlueControl software can be used to match the input to the sensor KTY 11-6 (characteristic is stored in the controller).

Physical measuring range: 0...4500 Ohm
Linearization segments: 16

Current and voltage signals
Span start, end of span: anywhere within measuring range
Scaling: selectable -1999...9999
Linearization: 16 segments, adaptable with BlueControl
Decimal point: adjustable
Input circuit monitor: 12,5% below span start (2mA, 1V)

CONTROL INPUT DI1

Configurable as direct or invers switch or push-button!
Connection of a potential-free contact suitable for switching „dry“ circuits.
Switched voltage: 2,5 V
Switched current: 50 µA

CONTROL INPUTS DI2, DI3

Configurable as switch or push-button!
Optocoupler input for active triggering
Nominal voltage: 24 V DC external
Current sink (IEC 1131 Type 1)
Logic “0” -3...5 V
Logic “1” 15...30 V
Current requirement: approx. 5 mA

TRANSMITTER SUPPLY UT

Output: 22 mA / ≥ 18 V
If the universal output OUT3 is used there may be no external galvanic connection between measuring and output circuits!

SUPPLEMENTARY INPUT INP2

Resolution: > 14 Bit
Scanning cycle: 100 ms
Accuracy: better 0,1%

Heating current measurement
via current transformer
Measuring range: 0...50mA AC
Scaling: adjustable -1999...0,000...9999 A

Current measurement range
Input resistance: approx. 120 Ω
Span: configurable within 0 to 20mA
Scaling: adjustable -1999...9999
Input circuit monitor: 12,5% below span start (4...20mA → 2mA)
### Outputs

* All logic signals can be OR-linked!

**Relay Outputs Out1, Out2**

- Contacts: 2 NO contacts with common connection
- Max. contact rating: 500 VA, 250 VAC, 2A at 48...62 Hz, resistive load
- Min. contact rating: 6V, 1 mA DC
- Operating life (electric): 800,000 duty cycles with max. rating

**Out3 Used as Relay Output**

- Contacts: Potential-free changeover contact
- Max. contact rating: 500 VA, 250 VAC, 2A at 48...62 Hz, resistive load
- Min. contact rating: 5V, 10 mA AC/DC
- Operating life (electric): 600,000 duty cycles with max. rating

Note: If the relays Out1...Out3 operate external contactors, these must be fitted with RC snubber circuits to manufacturer specifications to prevent excessive switch-off voltage peaks.

**Out3 As Universal Output**

- Galvanically isolated from the inputs.
- Freely scalable
- Resolution: 11 Bit
- Time constant of the D/A converter $T_{90}$: 50 ms
- Limiting frequency of the continuous controller: > 2 Hz

**Current output**

- 0/4...20 mA, configurable.
- Signal range: 0...approx. 21.5mA
- Load: ≤ 500 Ω
- Load effect: 0.02%/100Ω
- Resolution: ≤ 22 µA (0.1%)
- Error: ≤ 40 µA (0.2%)

**Voltage output**

- 0/2...10V configurable
- Signal range: 0...11 V
- Load: ≥ 2 kΩ
- Load effect: none
- Resolution: ≤ 11 mV (0.1%)
- Error: ≤ 20 mV (0.2%)

**Out3 used as transmitter supply**

- Output: 22 mA / ≥ 13 V

**Out3 used as logic output**

- Load ≤ 500 Ω
- Load > 500 Ω
- Load > 10 V

**Outputs Out5, Out6**

Galvanically isolated optocoupler outputs.

Grounded load: common positive control voltage.

- Output rating: 18...32 VDC; ≤ 70 mA
- Internal voltage drop: ≤ 1V with $I_{\text{MAX}}$
- Protective circuit: built-in against short circuit, overload, reversed polarity (free-wheel diode for relay loads).
FUNCTIONS

Control behaviour
- Signaler with adjustable switching differential (ON/OFF controller)
- PID controller (2-point and continuous)
- Delta / Star / Off or 2-point controller with switch over from partial to full load
- 2 x PID (heating/cooling)
- 3-point stepping controller
Two parameter sets for manual gain scheduling
Self-tuning control parameters or adjustable manually via front keys or BlueControl software.

Behaviour with 2- and 3-point controllers
- Standard behaviour:
  For precise matching of the required output value at the output signal limits, the controller changes the cycle times for heating and cooling automatically and continuously.
- With constant cycle times:
  The length of the shortest heating and cooling pulse is adjustable.
- Water cooling linear (heating=standard):
  To ensure a sufficient cooling effect, the cooling function starts only after reaching an adjustable temperature value. The pulse length is adjustable, too and remains constant for all output values.
- Water cooling nonlinear (heating=standard):
  The general function is described above but the controller additionally takes in consideration that the water cooling is usually much stronger than the heating (thus preventing unfavorable behavior when changing from heating to cooling).

Set-point functions
- Adjustable set-point gradient 0,01...9999 °C/min
- Set-point control
- Set-point/cascade control
- Program controller with 4 segments (set-point/section time)

Behaviour with sensor break or short circuit:
- Control outputs switched off
- Switch-over to a safe output value
- Switch-over to a mean output value (PID controller)

SPECIAL FUNCTIONS
Boost-Function
The boost function provides a short-term increase of the set-point, e.g. with hot runner control, in order to clear nozzles of “frozen” rests of material.

Start-up circuit
For temperature control, e.g. with hot runners. High-performance heating elements with magnesium oxide insulation must be heated slowly, to remove any humidity and to prevent destruction.

LIMIT SIGNALLING FUNCTIONS
Max., Min. or Max./Min. monitoring with adjustable hysteresis.

Signals which can be monitored:
- Process value
- Control deviation
- Control deviation with suppression during start-up or set-point changes
- Effective set-point
- Output signal Y
- Control deviation always compared to internal setpoint SP even if SP2 or SP.E is activated.

Functions
- Input signal monitoring
- Input signal monitoring with latch (reset via front key or digital input)

Several limit signals or alarms can be OR-linked before being output.
Applications: Release of a brake with motor actuators, general alarms, etc.

ALARMS
Heating current alarm
- Overload and short circuit
- Open circuit and short circuit
Limit value adjustable 0...9999 A

Control loop alarm
Automatic detection if there is no response of the process to a change of output value.

Sensor break or short circuit
Depending on selected input type, the input signal is monitored for break and short circuit.

MAINTENANCE MANAGER
Display of error signals, warnings, and latched limit messages in the error list.
Signals are latched, and can be reset manually.
Possible signals in the error list:
- Sensor break, short circuit, reversed polarity
- Heating current alarm
- Control loop alarm
- Fault during self-tuning
- Latched limit messages
- E.g. re-calibration warning
  (If the adjusted operating hours are exceeded a message is displayed)
- E.g. maintenance interval of actuator
  (If the adjusted switching cycles are exceeded a message is displayed)
- Internal fault (RAM, EEPROM, ...)

Flashing Error LED indicates active alarm in the error list:

Start-up circuit
When the process is controlled towards the start-up set-point, the output value is limited. The start-up set-point is kept constant during the start-up holding time. After that, the main setpoint SP is controlled. If a disturbance reduced the process value, the start-up circuit is activated again. 

KS 50-1 TCont
**OPERATION AND DISPLAY**

**Display**
- Process value: LED with 7 segments, 10.5 mm
- Lower display: LED with 7 segments, 7.8 mm

**Operating functions**
The functions of the \( \square \)-key and the \( \square \)-key are configurable:

<table>
<thead>
<tr>
<th>Function</th>
<th>( \square )</th>
<th>( \square )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote (no front operation)</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>SP.2 (2nd setpoint)</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>Y.2 (2nd output value)</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>SP.E (external setpoint)</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>Manual operation</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>C.OFF (controller function off)</td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>Lock of manual key</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>Reset of latched limits and error list</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>Boost</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>Parameter set 1/2</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>Programmer run/stop</td>
<td></td>
<td>X</td>
</tr>
</tbody>
</table>

Several functions can be combined e.g. SP.2 and parameter set switch-over (gain scheduling) with only one key.

**EXPERT FUNCTIONS**

**PROTOCOL**
The KS 50-1 TCont supports a protocol that is widely used in the plastics processing industry, with specifications according to Arburg, Engel, and others.

**TEMPERING UNITS**

Functions:
- Start of controller operation (r)
- Cooling to return flow temperature (k)
- Switch-off (p)
- Exchange of setpoint and process value

Connection:
- Heating, cooling
- Pump control
- Safety temperature limiter (STL)

Switch-overs:
- Remote / Local
- Local start / stop

Status information:
- Sensor operating mode internal/external
- Level alarm
- Flow alarm

Return flow temperature:
- Adjustable via \( SP.2 \)

Limit value for STL:
- Adjustable via \( L \)

**HOT RUNNERS**

Functions:
- Controller operation (r)
- Positioner operation (s)
- Disabling a channel (a)
- Exchange of setpoint and process value

Connection:
- Heating, cooling

Switch-overs:
- Remote / Local

**LOCAL OPERATION**

Starting / stopping the controller in the local mode is possible via the inputs di1…di3 or by switching the setpoint SP on and off.

**POWER SWITCH-ON**

After power-up, the controller goes into the remote mode and then into the standby mode until the normal controller mode is activated.

---

**Connection example:**

- Heating
- Cooling
- Pump
- Tool
- Tempering unit
### POWER SUPPLY

Depending on version:

#### AC SUPPLY
- **Voltage:** 90...260 V AC
- **Frequency:** 48...62 Hz
- **Power consumption:** approx. 7 VA

#### UNIVERSAL SUPPLY 24 V UC
- **AC voltage:** 20,4...26,4 V AC
- **Frequency:** 48...62 Hz
- **DC voltage:** 18...31 V DC
- **Power consumption:** approx. 7 VA (W)

### BEHAVIOUR WITH POWER FAILURE

Configuration, parameters, and adjusted set-points, control mode: Non-volatile storage in EEPROM

### BluePort FRONT INTERFACE

Connection of PC via PC adapter (see “Accessories”). The BlueControl software is used to configure, set parameters, and operate the KS 50-1 TCont.

### BUS INTERFACE

#### RS 485/422
Screened cables must be used.
- **Galvanically isolated**
  - **Physical:** RS 485/422
  - **Transmission speed:** 2400, 4800, 9600, 19.200 Bit/sec
  - **Parity:** Even, odd, none
  - **Address range:** 1...32
  - **Number of controllers per segment:** 32

#### TTY (20 MA CURRENT LOOP)
Screened cables must be used.
- **Galvanically isolated**
  - **Physical:** 20 mA current loop
  - **Transmission speed:** 2400, 4800, 9600, 19.200 Bit/sec
  - **Parity:** Even, odd, none
  - **Address range:** 1...32
  - **Voltage drop:** ≤ 2V
  - **Number of controllers per bus:** ≥6

### ENVIRONMENTAL CONDITIONS

#### Protection modes
- **Front panel:** IP 65
- **Housing:** IP 20
- **Terminals:** IP 00

#### Permissible temperatures
- **For specified accuracy:** 0...60°C
- **Warm-up time:** < 15 minutes
- **Temperature effect:** < 100ppm/K
- **For operation:** -20...65°C
- **For storage:** -40...70°C

#### Humidity
- 75% yearly average, no condensation

#### Shock and vibration

**Vibration test Fc (DIN 68-2-6)**
- **Frequency:** 10...150 Hz
- **Unit in operation:** 1g or 0,075 mm
- **Unit not in operation:** 2g or 0,15 mm

**Shock test Ea (DIN IEC 68-2-27)**
- **Shock:** 15g
- **Duration:** 11ms

#### Electromagnetic compatibility
Complies with EN 61 326-1
- **Meets the immunity requirements for continuous, unattended operation**
- **Meets the radiation requirements of Class B for rural areas**
- **In case of surge interference, increased measurement errors must be expected**

### GENERAL

#### Housing
- **Material:** Makrolon 9415, flame-retardant
- **Flammability class:** UL 94 VO, self-extinguishing

#### Safety tests
- Complies with EN 61010-1 (VDE 0411-1):
  - Over voltage category II
  - Contamination class 2
  - Working voltage range 300 V
  - Protection class II

#### Certifications
- UL certification (applied for)

#### Electrical connections
- Flat-pin connectors 1 x 6,3 mm or 2 x 2,8 mm to DIN 46 244

#### Mounting
- Panel mounting with two fixing clamps at top/bottom or left/right
- Close mounting possible
- **Mounting position:** not critical
- **Weight:** 0,27 kg

#### Accessories supplied with unit
- Operating instructions
- 2 fixing clamps

### PROTOCOLS

Selection via parameter **Prot**
- **MODBUS RTU**
- **Protocol for tempering units**
- **Protocol for hot runner systems**

* according to Arburg specification
**ACCESSORY EQUIPMENT**

**BlueControl (Engineering Tool)**

PC-based program for configuring, setting parameters, and operating (commissioning) the KS 50-1 TCont controller. Moreover, all the settings are saved, and can be printed on demand. Depending on version, a powerful data acquisition module is available, complete with trend graphics.

**Visibility masks**

The BlueControl software can be used to hide any number of controller parameters and configuration settings. This ensures that only certain parameters can be changed on-site. All critical and safety-relevant parameters are invisible!

Two parameters are only visible.

```

Configurations that can only be implemented via the BlueControl software (not via the front-panel keys):

- Customer-specific linearizations
- Enable „forcing” for inputs/outputs.
- Adjustment of limits for operating hours and switching cycles
- Switch-over to 60 Hz mains frequency
- Master/slave configuration
- Disable operator actions and operating levels, plus password definition
- Prevent automatic optimization of cycle times T1, T2

**Hardware requirements:**

A PC adapter (see „Accessories”) is required for connecting the controller.

Updates and demo software can be downloaded from:

www.pma-online.de
