**PROFILE**

The pressure transmitter PM31 measures gauge- and absolute pressure in gases, vapours and liquids and can be used in nearly all areas of process engineering. The transmitter works on the two-wire principle and features a ceramic measuring element. Gauge pressures from 10 mbar up to 40 bar, and absolute pressures from 40 mbar up to 40 bar are converted into a standard pressure proportional 4...20-mA signal. The BUS version uses digital communication for the signal. The digital version can be equipped with a local display comprising digital display and bargraph whereas the analogue version allows only a bargraph display. The applied technology ensures reliable and simple operation.

**DESCRIPTION**

The transmitter PM31 comprises the measuring cell, the process coupling and the electronics housing. Connecting terminals are accessible in a separate compartment after opening the lid. The process medium acts direct onto the ceramic measuring diaphragm. Process couplings are available in various materials.

The analogue-electronic is an economic, fast and simple version of transmitter PM31. Zero and span can be adjusted locally by means of two potentiometers. With dip switches coarse setting of span with a spread of 1:1 up to 10:1 is possible. The required pressure signals must be provided as reference.

The analogue electronics features adjustment of Zero with ± 10 % within the cell limits.

Digital-electronics provides widespread operating and adjustment facilities with the corresponding Smart hand-held terminal or via PC engineering. It realises precise signal processing and monitors the transmitter function from sensor to output function. Local operation is performed by means of push buttons and the pluggable display. The required pressure signals must be provided as reference and will be stored via push button operation. It also is possible to set inverse signal direction with the smart version.

The transmitter monitoring function generates an alarm if any fault is being detected. The alarm acts onto the analogue output signal and can be set in its function. Based upon the used measuring cell a turn down of 10:1 is possible.

**TECHNICAL DATA**

**INPUT**

Absolute and gauge pressure in gases, vapours, liquids. Ceramic measuring cell for ranges up to 40 bar.

Climatic class

4K4H to DIN EN 60721-3

Vibrations

No effects with 4 mm stroke at 5...15 Hz, or 2g at 15...150 Hz, or 1 g at 150...2000 Hz

ELECTROMAGNETIC COMPATIBILITY

Complies with EN 50 081-1 and EN 50 082-2 as also NAMUR recommendation NE21: effect < 0.5 %

GENERAL

HOUSING

Di-cast aluminum housing (AlSi12) surface chromated with Epoxy coating

Cover seal: Silicon rubber

Type label: SS

MODE OF PROTECTION

IP 66 / Nema 4 with cable gland

IP 68 / Nema 6P with fixed cable (1m WG for 24 h, respectively 1.8 m WG for 30 minutes)

ELECTRICAL CONNECTION

Screw terminals for 0.5...2.5 mm$^2$

selectable via

Cable gland M20 x 1.5

½ NPT for cable conduit

Harting plug HAN 7

INSTALLATION CONDITIONS

Orientation as required, orientation-dependend zero shifts up to 3 mbar can be adjusted.

WEIGHT

approximately 1.6 kg
